

Quarterly Backup Restore Test Report

Business continuity test report | RPT-BCP-2026-Q2

Document owner	Infrastructure Reliability
Effective date	2026-06-18
Applicable reference	DE.CM-01 - Network monitoring

Test objective

Infrastructure Reliability tested the restoration of the customer orders database from the 18 June 2026 backup set. The test measured recovery time, data integrity, and operator runbook readiness.

Results

The database was restored to the isolated recovery account in 47 minutes. Row counts matched the source snapshot and the application team completed a read-only validation. Two runbook steps were updated after the exercise.

Limitations

This report covers backup creation and recovery only. It contains no network or network-service monitoring scope, telemetry source, adverse-event detection rule, alert triage record, or monitoring coverage review.
